Scope of Work:

Course Builds: Build six additional course instances within Moodle, using the established U.S. Live Cohort & Self-Directed structure as the framework for the course

- 1 additional English version for the Global Live Cohort
- 5 translated versions:
    - Spanish
    - French
    - Hindi
    - Russian
    - Bangla

Each of these courses will mirror the structure and layout of the U.S. Live and Self-Directed learning path. Translated content will be provided by Survivor Alliance.

Content Upload: Upload and organize content within each course to match the already established structure.

Learner Navigation: Configure clear and distinct pathways in Moodle so that:

- Each learner cohort is routed to the correct course version based on their language and cohort
- Enrollment settings and access controls are configured to ensure learners cannot access the wrong version
- Course sequencing and progression logic across all learning paths

Staff Navigation Support: Ensure knowledge, documentation, and access are transferred to Survivor Alliance staff to support understanding of how courses and versions are structured.
